

SEMEN ANALYSIS - POST-VASECTOMY

Your doctor has requested examination of a semen specimen to determine the outcome of your recent vasectomy. If you have received specific instructions from your doctor relating to specimen collection and transport, please follow those instructions.

If you have received no other instructions relating to semen collection, please follow the instructions below.

Collection of specimen

Collection centres and laboratories are not equipped for semen collections. This should take place at home.

1. Abstain from ejaculation for 2-7 days.
2. Collect complete ejaculate (by masturbation) into the container provided.
3. Ensure the container is labelled with your surname, first name, date of birth, time and date of collection.
4. Mark the container 'Post-vasectomy'.
5. Do not refrigerate.

Delivery of specimens

1. Ideally, the specimen should be delivered to the nearest laboratory (see overleaf) within 1 hour of collection.
2. If you cannot deliver the specimen directly to the nearest laboratory, it can be taken to a collection centre, but this may cause transport delay and affect the results.

SEMEN ANALYSIS - POST-VASECTOMY
